

4S principles of prompt engineering

The 4S Method for AI prompt engineering focuses on Simplicity, Specificity, Sensitivity, and Structure to create effective AI interactions.

- **Simplicity:** Use clear and concise prompts.
- **Specificity:** Define precise prompts for targeted responses.
- **Sensitivity:** Consider cultural, ethical, and emotional context.
- **Structure:** Organize prompts logically.

This method ensures accurate, relevant, and ethical AI responses, suitable for educational content, customer service bots, and analytical reports. While it enhances clarity and relevance, it may limit creativity and require iterative adjustments.

Clarification

Knowledge Base is called Docsets on Microsoft learn. But is the same feature!
